

MARION COUNTY SOLAR PROJECT

April 2026
Issue 6

Hello neighbor!

It's official!

Marion County Solar Project began commercial operations in March 2026. Now that this utility-scale solar project is operational, it will generate enough energy each year to power approximately 20,800 Ohio homes. Thank you to the Marion County community for your collaboration throughout the project's development and construction.

Marion County Solar Project provided another \$1 million payment to the county in mid-February. This extra revenue can be used to support roads, schools, infrastructure, and more.

Our team's involvement in Marion County doesn't end here, and we remain committed to supporting the community who makes Marion County what it is. Even so, entering the operations stage means this will be our last construction newsletter.

Should you need to contact the team about the project, our operations team can be reached at (740) 780-5335.

Thank you for joining us throughout our journey of construction! Bright days are ahead.

Sincerely,
